In this book, tribute is given to him and to contemporary protagonists of the most appropriate method of construction in order to establish a meaningful agenda for tomorrow. “Why Is Construction So Backward” is a welcome and timely publication, which takes into account material as well as historic factors and develops a coherent argument for the advancement of the building sector in our time. The book traces back the obstacles within the industry and goes beyond immediate parameters by investigating such important factors as the control of the land, the jurisdiction of the production process,
